DETAILED ACTION

Allowable Subject Matter

Claims 1-38 are allowed.

The following is an examiner's statement of reasons for allowance: Nobileau '702 reference is considered to represent the most relevant state of the art, which discloses an apparatus and method of casing a wellbore using an expandable collapsed tubular string for lowering into and below an existing casing string. The prior art reference further teaches the step of reforming the collapsed tubular string to its cylindrical shape using a hydraulically actuated opening tool and further plastically deforming its upper portion with forging packers tool into tight gripping and sealing engagement with the existing casing. The prior art of record, however at least fails to teach or suggest the step of shifting the expander to a larger diameter and expanding the reformed portion by urging the expander therethrough, since the opening tool is not shiftable to a larger diameter and the forging packers of the prior art are run in a separate stages and are not movable or disposable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. . Meling et al, Nobileau '560, Freeman et al, all show expandable tubular and applications. Any inquiry concerning this communication or earlier
